

Interconnect your global branch offices with Crux LX

Cost savings with SIP

Session Initiation Protocol (SIP) is a multi-channel, low-cost, digital landline that is fast replacing the old, single-channel, PSTN analog line in Enterprises. Being digital, SIP is provisioned over internet but involves high cost and complexity. Setting up SIP over Crux LX is very simple. It is the perfect alternative to complex and expensive telephony for SMB.

Port PSTN landline to SIP with Crux LX, and enjoy a payback in less than 12 months.

Easy Auto-Attendant

Interactive Voice Response (IVR), popularly known as Auto-Attendant, allows businesses to auto-play a menu-driven recorded message that allows caller to self-direct distribution of call and connect to relevant party.

It takes less than 5 minutes to record and setup a professional IVR on Crux LX.
